

**Organic Chemistry I**  
**Spring 2003 -- Professor Gary R. Gray**  
**Text: "Organic Chemistry," Fifth Edition, L. G. Wade, Jr.**

	<u>Pages</u>
I. Introduction	
II. Electronic Structure and Bonding	3 – 21
A. Atomic Structure	
B. Bond Types	
C. Resonance Structures	
D. Chemical Formulas	
E. Elements of Unsaturation	274 – 276
III. Organic Compounds as Acids and Bases	21 – 33
A. Arrhenius acids and bases	
B. Brønsted-Lowry acids and bases	
C. Acid and base strength	
D. Lewis acids and bases	
IV. Structure and Properties of Organic Molecules	38 – 76
A. Molecular orbitals	
B. Hybridized atomic orbitals	
C. Bond rotation or rigidity	
D. Introduction to isomerism	
E. Polarity of bonds and molecules	
F. Intermolecular attractions and repulsions	
G. Survey of organic compounds	
V. Alkanes and Cycloalkanes	80 – 121
A. Nomenclature of alkanes	
B. Structures and conformations of the simple alkanes	
C. Nomenclature of cycloalkanes	
D. Structures and conformations of the simple cycloalkanes	
E. Chemical and physical properties of alkanes and cycloalkanes	
VI. The Study of Chemical Reactions	Handout
VII. Stereochemistry	167 – 208
A. Chirality	
B. Optical activity	
C. <i>R,S</i> Nomenclature (Cahn-Ingold-Prelog convention)	
D. Chiral compounds without chiral atoms	
E. Fischer projections	
F. Diastereomers	
G. Meso compounds	
H. Resolution of enantiomers	
VIII. Alkyl Halides: Nucleophilic Substitution and Elimination	212 – 267
A. Nomenclature of alkyl halides	
B. Preparation of alkyl halides	
C. The S <sub>N</sub> 2 reaction	
D. The S <sub>N</sub> 1 reaction	
E. The E1 reaction	
F. The E2 reaction	
G. Summary: Reactions of alkyl halides	

IX.	Structure and Synthesis of Alkenes	272 – 310
	A. Electronic structure of the double bond	
	B. Nomenclature	
	C. Stability	
	D. Synthesis	
X.	Reactions of Alkenes	314 – 365
	A. Reactivity of the double bond	
	B. Electrophilic additions	
	C. Oxidations	
	D. Polymerization	
XI.	Structure and Synthesis of Alkynes	370 – 401
	A. Electronic structure of the triple bond	
	B. Nomenclature	
	C. Acidity	
	D. Synthesis	
	E. Addition reactions	
XII.	Structure and Synthesis of Alcohols	405 – 441
	A. Nomenclature	
	B. Acidity	
	C. Synthesis	
XIII.	Reactions of Alcohols	445 – 486
	A. Oxidation	
	B. Reduction	
	C. Conversion to alkyl halides	
	D. Dehydration	
	E. Esterification	
	F. Formation and reactions of alkoxides	
	G. Multistep synthesis using alcohols	
XIV.	Nuclear Magnetic Resonance Spectroscopy	539 – 579
	A. Nuclear spin	
	B. Chemical shift	
	C. Integration	
	D. Spin-spin splitting	
	E. Stereochemical nonequivalence of protons	
	F. Time dependence of NMR spectroscopy	
XV.	Infrared Spectroscopy and Mass Spectrometry	490 – 532
	A. Infrared spectroscopy	
	1. Introduction	
	2. Characteristic absorptions	
	3. Interpreting infrared spectra	
	B. Mass spectrometry	
	1. Introduction	
	2. Determining molecular formula	
	3. Fragmentation patterns
